**Smart Construction
Pilot Flex v1.9.2
feature improvements**

Changes and Added Features

Main Items

1. Addition of wheel loader model
2. Display of machine pitch and roll angles as percentages
3. Display of the name of the design surface currently in use

Others

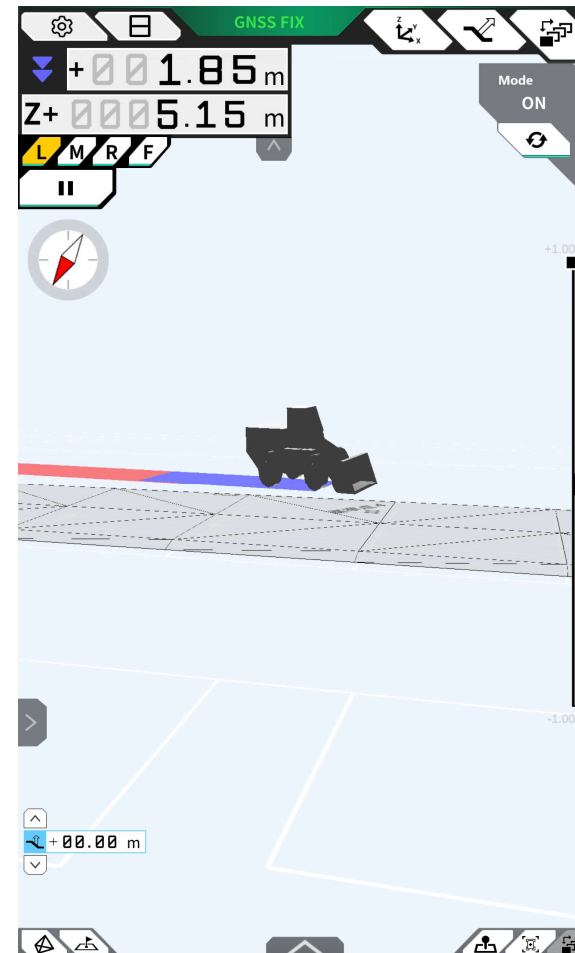

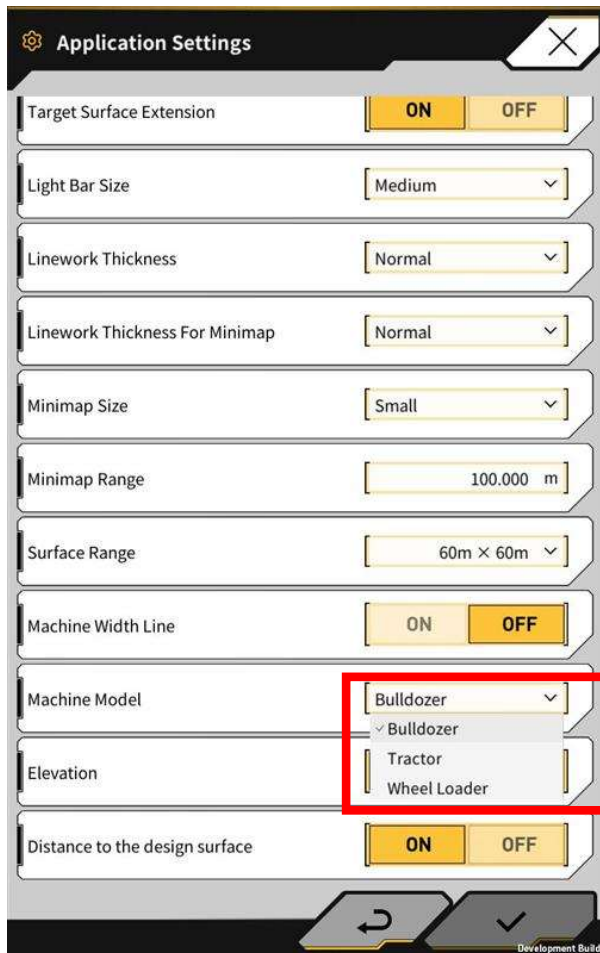

- Other bug fixes and specification changes

Addition of wheel loader model

You can now select a **wheel loader** as the display model on the **Machine Guidance screen**. It can be selected from the **Application Settings** screen.

Note:

Articulated motion of the wheel loader is **not supported**

Display of machine pitch and roll angles as percentages

On the Machine Guidance screen, the current machine angle can now be displayed as a percentage. The name of the design surface currently in use can also now be displayed.
